

Companies are complex systems. Comparable to living organisms, they are home to countless activities at any one time. The IT infrastructure is the central nervous system, intelligently connecting the various divisions to enable efficient business processes across the enterprise. Everything is networked - any local failure can directly impact the overall system. Consequently, successful companies treat their IT platform as a strategic business-enabler and continuously fine-tune it for top performance.

Acting is better than reacting. We are committed to delivering IT concepts that make companies flexible and robust - not just for large international enterprises, but also for small and medium-sized businesses operating in competitive domestic markets.

Profile

Business and IT Solutions (BITS) focuses on bringing together innovation, business opportunities and technologies to deliver quality solutions and software tools that help customers run their business with maximum efficiency.

BITS team of technologists comprises software designers, engineers, managers and extensive domain expertise. BITS network and experience in software product design, development, localization and international marketing of software products is a core competence that it leverages to map your technology innovations to the business opportunities and markets that need them.

Systems Analysis and Design

Analyzing an operational network or software has helped many organizations make the right decision for their future. But it has been proven time and again that proper analysis and design has helped in implementation of rock solid foundations for the IT. With the constant growing IT needs and changing environment this part of a business is very critical.

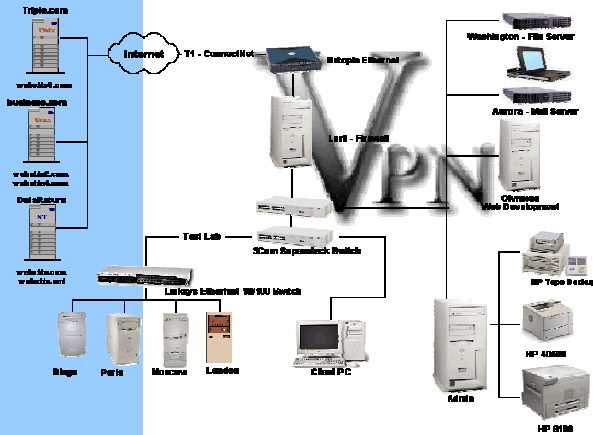

BITS consultants have successfully designed and implemented many software and computer networks in large and small organizations. Some of our clients have grown up to 15 times their original size in manpower and 80% of their needs changed without any major changes in the network setup except for upgrades.

Project Management

Our IT and project management services are different because we understand both the technical side and the business side of Information Technology. We understand the impact your IT group's projects can have on your company's productivity, finances, and market share. We speak the language and can understand the pressures of your techies, your managers, and your executive staff. We know that your project has to mirror your business processes. We've been there.

Consultancy Services

Tailored Solutions

BITS proved time and again its expertise in developing tailored solutions. Tailored solutions provide all your regular needs with special attention to those minor details that any ready or customized package cannot cater to.

Software Solutions

With growing demands companies need fast solutions and BITS has them. **Adobe** for all your professional designing and documentation needs. **Xpert Business Solutions** for telephony requirements, Image processing or office automation. **NetSMART** the smart way of network management.

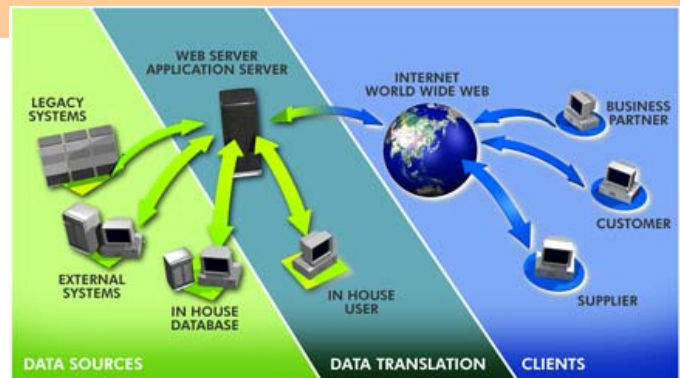

Systems Integration

In business today, integration is survival. Integration increases internal knowledge and productivity by enabling users to share information rapidly. Integration automates your business processes for reliable execution, resulting in increased customer satisfaction. Integration allows you to develop deeper partnerships through the fast and seamless exchange of key information with your business partners.

Large organizations over time have overgrown their legacy systems. Modern businesses are being built around the internet. Medium and small organizations have acquired different packages that accomplish the various day-to-day tasks.

This being the information age management expects to get all the information at the click of a mouse. BITS analyzed designed and developed integration solutions for legacy systems, time attendance requirements and call management systems.
